## Document Revision Process

### Project: Construction Plans

- **Early Grading:**

1. The revision block shall note Revision 1 (on all sheets being issued) as 'issued for early grading', with the date being the date the mylars are sealed, signed and dated by the Professional Engineer.
2. The sheet numbers being issued shall remain the same as they were within the full construction set.
3. The cover sheet shall remain the same as the sheet to be issued with the full permit, with a line through all sheets in the Index that are not being issued for early grading.

- **Construction:**

4. The revision block shall note Revision 1 on all sheets as 'issued for construction' (if the sheet has not been previously issued for early grading), with the date being the date the mylars are sealed, signed and dated by the professional engineer.
5. If a specific sheet has been issued for early grading as Revision 1, then Revision 2 shall be noted as 'Issued for Construction'. All revisions to all drawings that were previously issued shall be clouded and noted with a revision triangle.
6. All drawings that were previously issued for early grading shall be re-issued with the full set of drawings.

- **Field Change Orders:**

7. *All current field change order revisions shall be clouded and noted with a revision triangle.*
8. *All previous revision clouds shall be removed, leaving the previous revision triangles.*
9. *The revision shall be noted in the revision block, listing the FCO number and a brief description of the revision. The date shall be the date the mylar is sealed, signed and dated by the engineer.*
10. *Mylars shall be submitted for signatures and replace the previously approved mylar.*

- **As-Built Record:**

11. All revision clouds shall be removed, leaving the revision triangles.
12. The as-built date shall be noted in the revision block.
